Multi Flint

Terracotta Red

The beauty of natural stone has often been used to remarkable effect in historic towns and gardens. Natural stone is a popular choice for your driveway, paths, patio and courtyard where the aesthetic element is essential.

Areas can be personalised by using different designs, for example incorporating coloured borders or brick edging, curves and circles to create a unique effect.

PICSBOND combines the flexibility and strength of resin and the aesthetic appeal of natural stone without the problems associated with loose gravel. This produces a tough and durable dressing to new or existing concrete or tarmac driveways.

The flexible nature of the **PICSBOND** system allows it to be installed on new or existing concrete, tarmac, wood and steel surfaces. With minimal maintenance required, **PICSBOND** offers exceptionally low life time costs.

PICSBOND adds colour and individuality using natural stone finishes. A combination of colours can create amazing finishes including bespoke designs and features.
